# THE COMPANY PROFILE

 PT AJIWANA TANGGUH NUSANTARA

Become a High - Quality Wood Product Manufacturer that is Oriented  
Towards Environmental Sustainability

## ABOUT US

At the beginning of its's production activity in 2003, PT. Ajiwana Tangguh Nusantara was a company of woodworking industry, dealing to product various kind of pre-finished product in order to fulfill the export market in some Asian and American country.

Together with the progress Situation of wooden industry in Indonesia, which is Continuously requiring efficiency in progressing the raw material to rise up it's added value, on 2005, we have been deciding to develop PT. Ajiwana Tangguh nusantara as a manufacturer of finished wooden product like door and door frame

Considering to the necessity of forest continuity as an important part of Indonesian natural Resources, our Committed corporate Policy is emphasizing material advantage from wood working product like MDF ( Medium Density Fiberboard ), Plywood, Blockboard, and also solid Wood from some plantation species like Mahogany, Teak, Falcata, and Pine. ( Industrial Plantation Forest ).

Locating about 6.000 m<sup>2</sup> of production area, and supported by reliable facility of machinery, we eager to provide product which is satisfied our customer by always. Located in Banyumas Regency, Central Java Province, Indonesia, we are a wood product manufacturer that specializes in high-quality lite-weight plywood.

Our location and the surrounding area are acknowledged as resources as well as plantation land of falcata (*Albizia falcata*) and jabon / burrflower-tree (*Neolamarckia cadamba*) both of which are fast-growing wooden plant species we use as our main raw material. The fast-growing nature of those two species is following our commitment to provide high-quality products to the global market without delivering bad impacts on Indonesia's natural forests

## COMPANY VISION

Become a high-quality wood product manufacturer that is oriented towards environmental sustainability.

## MISSION STATEMENT

- Processing the raw materials from sustainable and legal resources into high-quality wood products that have competitiveness in the global market.
- Providing good benefits in the form of investment and job opportunities
- Taking roles actively alongside all stakeholders in the environmental preservation efforts.

## CORE VALUE

### RELIABLE

We can manufacture and distribute innovative and Reliable products

### TOUGH

The ever - increasing demand for our products makes us tough

### SUSTAINABLE

We strongly consider the fulfillment of the needs of future generations

## RAW MATERIAL

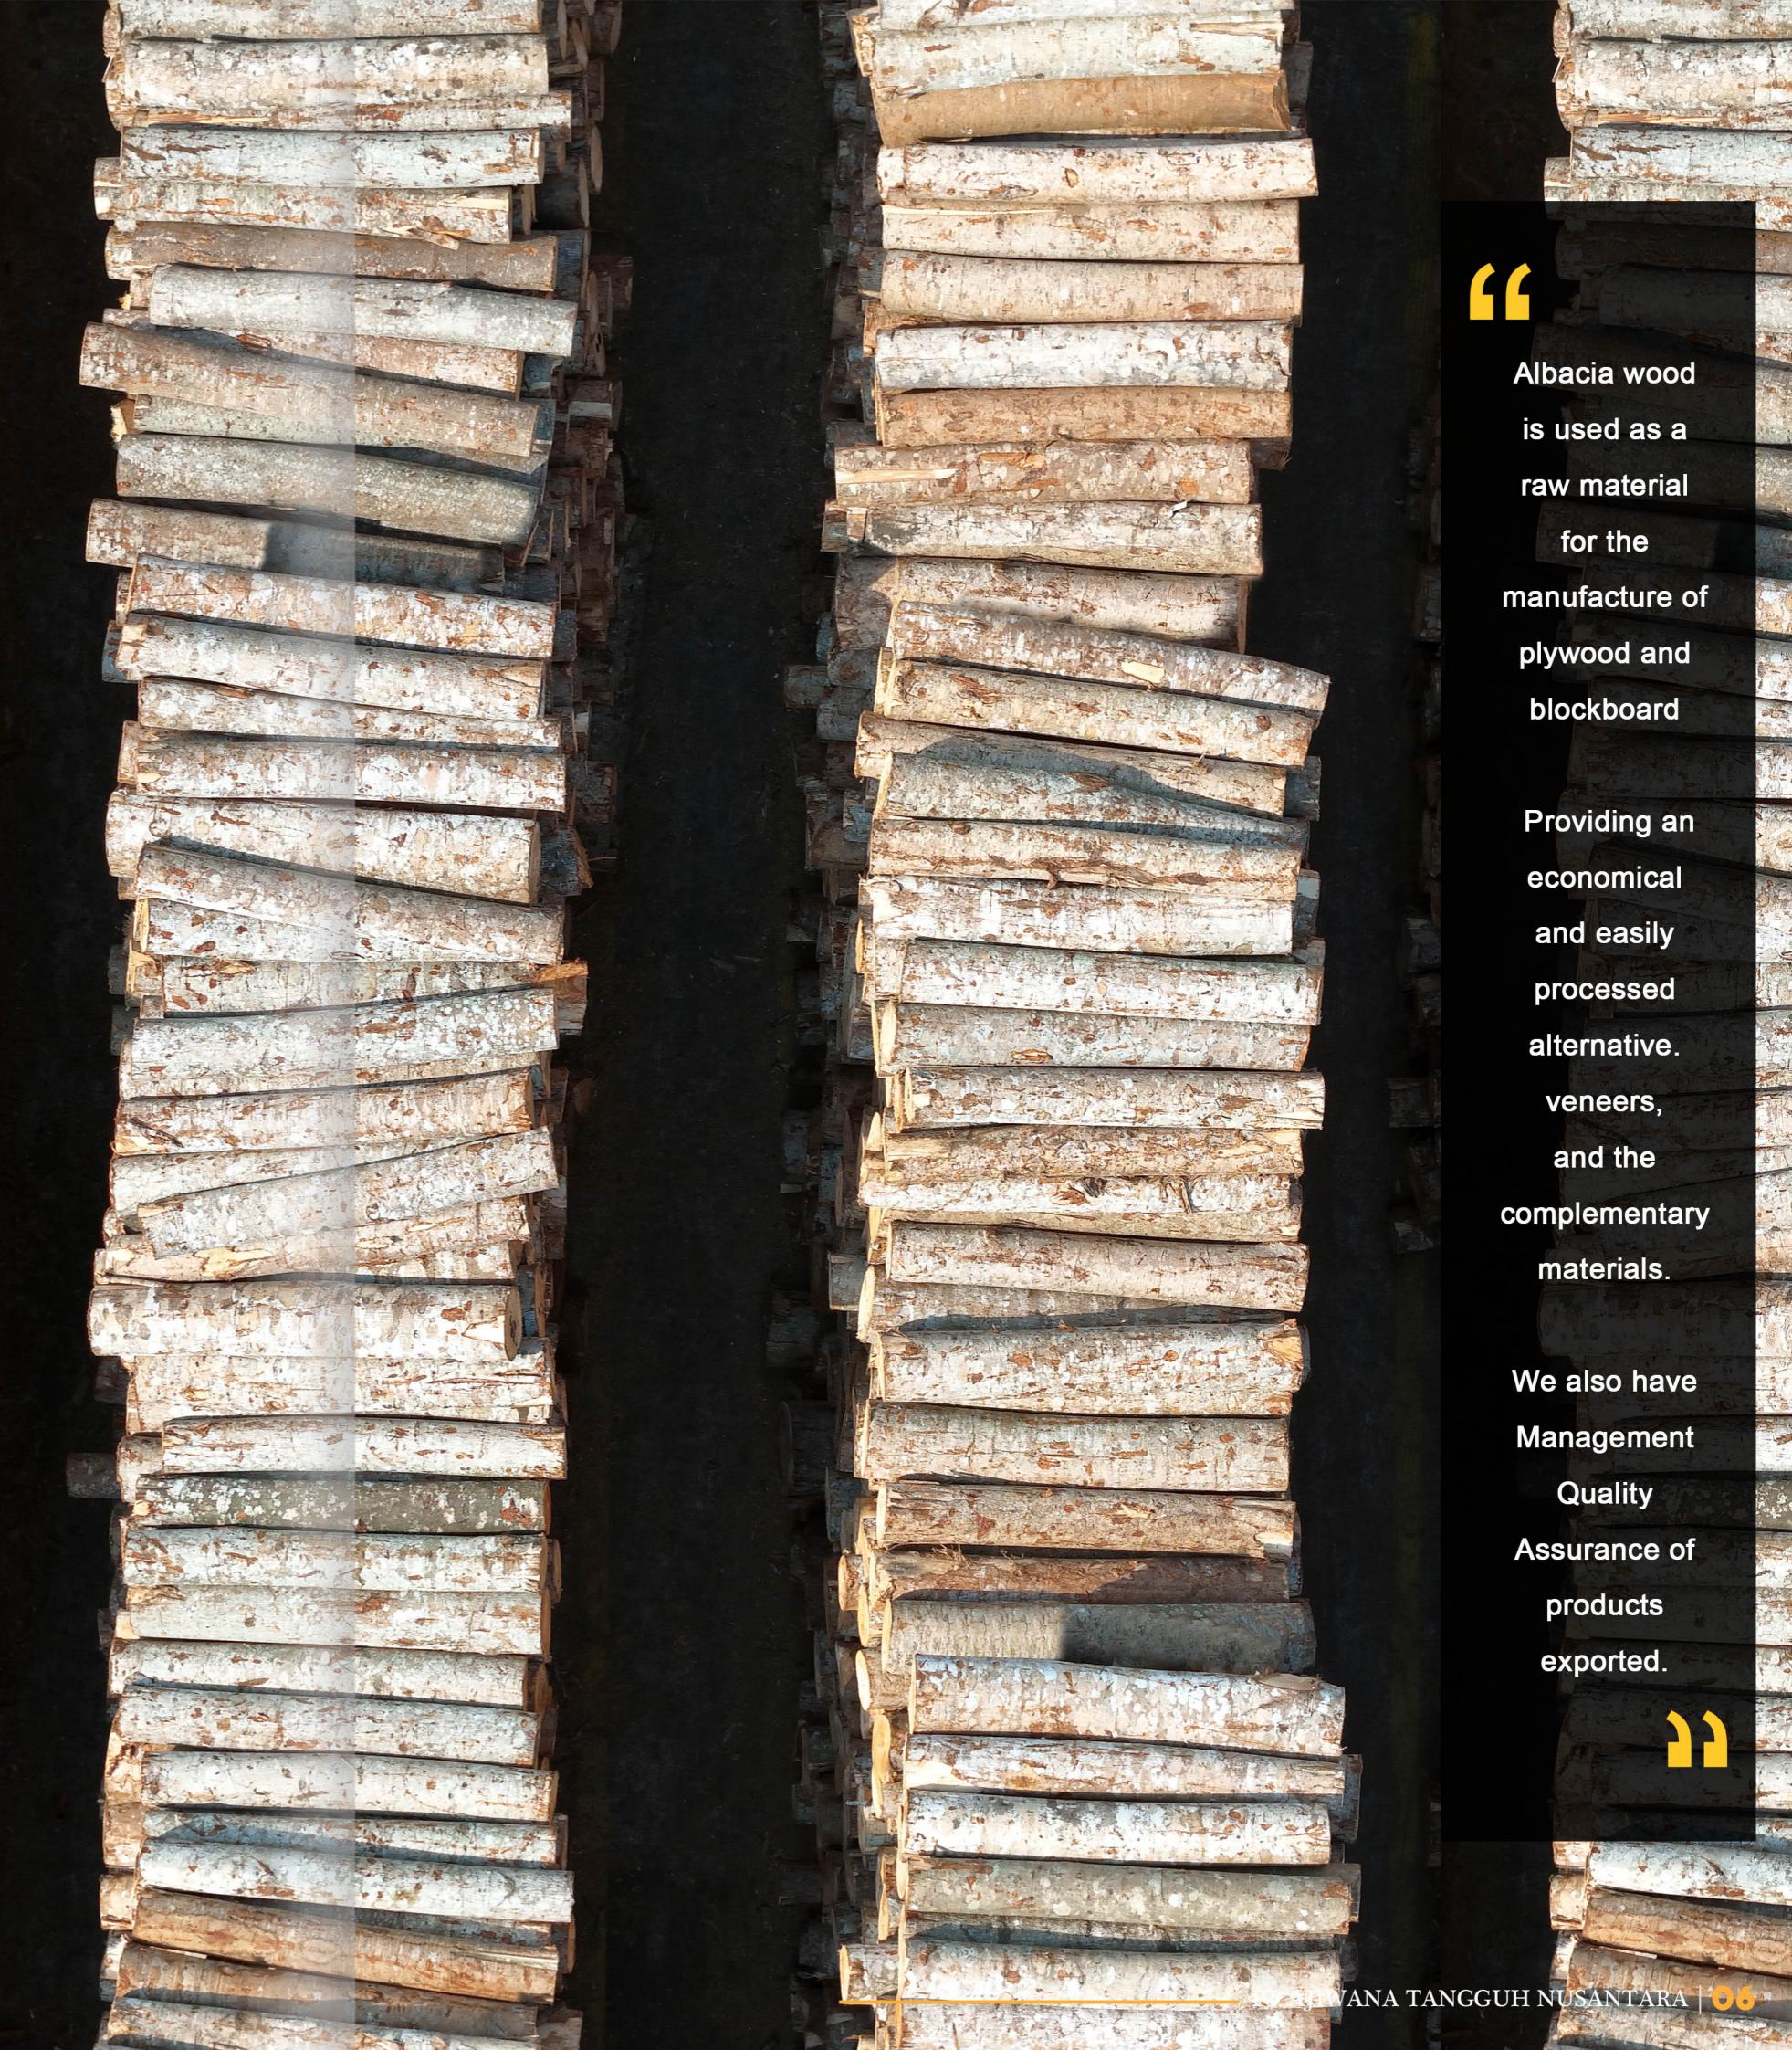

Indonesia has a nature that is full of richness. One of them is wood. We use sengon wood or its Latin name *Albizia chinensis*, which comes from forests cultivated by timber plantation sources.

Albacia wood is very light compared to other types of wood, Albasia has a light color, usually yellowish white, and a smooth texture with straight fibers. Albacia trees can grow very fast, reaching optimal height within 5-7 years, making them a good choice for afforestation and reforestation

Being a rapidly renewable resource, this wood is environmentally friendly and supports forest sustainability.

Albacia wood is an economical and versatile choice for a variety of applications, especially in furniture making and lightweight construction. With its lightweight and easy-to-treat characteristics, it offers a practical solution for a variety of needs, although its limited strength and pest resistance need to be considered in its use.

We offer the best quality of our products by closely monitor the process. All the process of making our products are conducted in our manufacture alone. We define the quality from the raw materials, the choice of veneers, and the complementary materials. We also have Management Quality Assurance of products exported.

“

Albacia wood is used as a raw material for the manufacture of plywood and blockboard

Providing an economical and easily processed alternative. veneers, and the complementary materials.

We also have Management Quality Assurance of products exported.

”

# PRODUCT

We focusing on create high quality of Plywood and Blockboard for Export Market. We use chosen wood as materials and further processed known as Double Sanding. Plywood is a wood panel composed of a layer of veneer on the outside, while the core can be made of veneer or other materials, tied with glue and then pressed in such a way

## PLYWOOD

Plywood is a composite material manufactured from thin layers, or "plies", of wood veneer that are glued together with adjacent layers, having both glued with each other at right angle. It is an engineered wood from the family of manufactured boards, which include plywood, medium-density fibreboard (MDF), oriented strand board (OSB), and particle board (or chipboard).

## BLOCK BOARD

Block board is a processed material from a wood that is made by compacting by machine, pasted together and given a coating material to become a sheet that resembles a board.

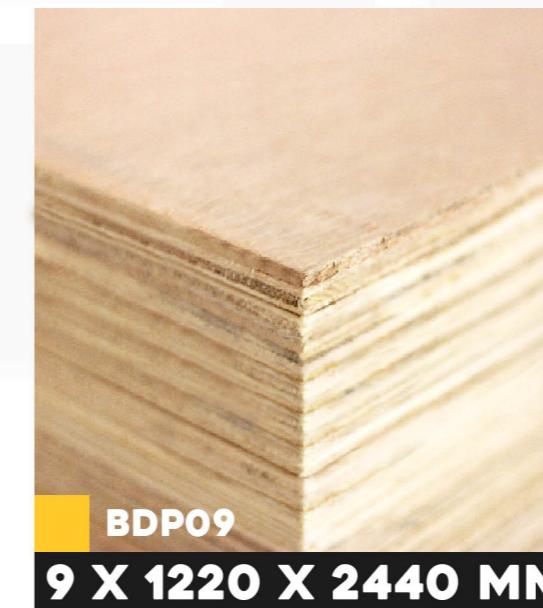

## PRODUCT

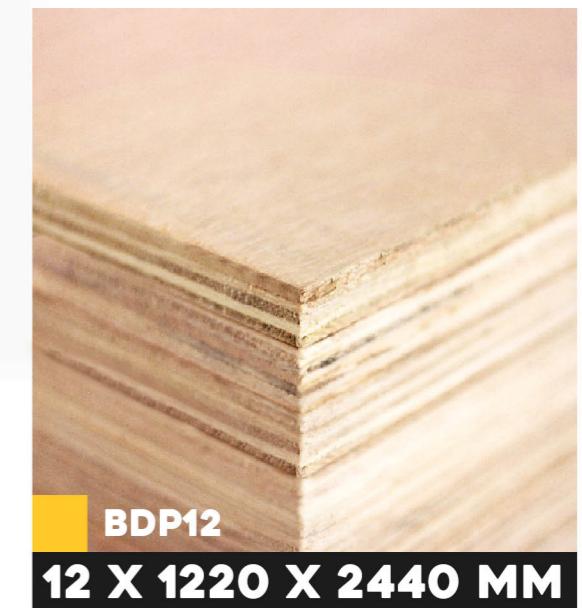

## PLYWOOD

To meet Export Market demand, we produce Plywood with BBCC category of quality. We also make MLH category of quality to meet Local Market demand. We use High Grade Falcata Wood for the core of the plywood, and Hard Wood for Face and Back Surface.
